Notice of Fee Increase on January 1, 2003

If a reply to a "Notice of Allowance and Fee(s) Due" is filed in the Office on or after January 1, 2003, then the amount due will be higher than that set forth in the "Notice of Allowance and Fee(s) Due" since there will be an increase in fees effective on January 1, 2003. See Revision of Patent and Trademark Fees for Fiscal Year 2003; Final Rule, 67 Fed. Reg. 70847, 70849 (November 27, 2002).

The current fee schedule is accessible from: <http://www.uspto.gov/main/howtofees.htm>.

If the issue fee paid is the amount shown on the "Notice of Allowance and Fee(s) Due," but not the correct amount in view of the fee increase, a "Notice to Pay Balance of Issue Fee" will be mailed to applicant. In order to avoid processing delays associated with mailing of a "Notice to Pay Balance of Issue Fee," if the response to the Notice of Allowance and Fee(s) due form is to be filed on or after January 1, 2003 (or mailed with a certificate of mailing on or after January 1, 2003), the issue fee paid should be the fee that is required at the time the fee is paid. If the issue fee was previously paid, and the response to the "Notice of Allowance and Fee(s) Due" includes a request to apply a previously-paid issue fee to the issue fee now due, then the difference between the issue fee amount at the time the response is filed and the previously paid issue fee should be paid. See Manual of Patent Examining Procedure, Section 1308.01 (Eighth Edition, August 2001).

Questions relating to issue and publication fee payments should be directed to the Customer Service Center of the Office of Patent Publication at (703) 305-8283.

DETAILED ACTION***Allowable Subject Matter***

Claims 1-48 are allowed. The following is an examiner's statement of reasons for allowance: With respect to Claims 1 & 37, the prior art of record fails to teach or suggest a fuel cell system having an anode chamber, a cathode chamber, a proton-conducting membrane and a valve for controlling the flow of gas from an anode chamber into a cathode chamber. With respect to Claim 25, the prior art of record fails to teach or suggest a method of reducing the amount of water in a cathode chamber of a fuel cell system by collecting an effluent gas in an anode chamber and then exhausting the effluent gas in the anode chamber through a cathode chamber. With respect to Claim 26, the prior art of record fails to teach or suggest a valve for controlling the flow of gas from an anode chamber into a cathode chamber wherein the effluent gas is exhausted through the cathode chamber. With respect to Claim 27, the prior art of record fails to teach a fuel cell system having an anode chamber, a cathode chamber and a proton-conducting membrane wherein the anode and cathode chambers are connected via conduits that have multiple valves and a gas plenum disposed along the conduits. With respect to Claim 36, the prior art of record fails to teach a direct methanol fuel cell system having an anode chamber, a cathode chamber and a proton-conducting membrane wherein the anode and cathode chambers are connected via conduits that have multiple valves and a gas plenum disposed along the conduits. Furthermore, the prior art of record fails to teach the flow of carbon dioxide gas from the anode chamber into the gas plenum and then from the gas plenum into the cathode chamber.

Art Unit: 1746

With respect to Claim 40, the prior art of record fails to teach a method of reducing the amount of water in a fuel cell system wherein the flow of water is directed from the anode chamber into the gas plenum and then from the gas plenum into and through the cathode chamber. With respect to Claim 41, the prior art of record fails to teach or suggest a nozzle having an inlet position adjacent to a gas permeable membrane portion in a cathode chamber and an outlet positioned adjacent the outlet of the cathode chamber. With respect to Claim 45, the prior art of record fails to teach a method of reducing the amount of water in a fuel cell system wherein the flow of water is directed from the anode chamber into the gas plenum and then from the gas plenum into the cathode chamber while a low pressure region is established adjacent to the cathode outlet.

The instant invention is deemed to be an unobvious modification over the inventions patented in publications: US '120 to Herron, who teaches a fuel cell system that is provided with an anode chamber, a cathode chamber, an electrolytic membrane separating the two chambers and a series of conduits that connects the anode and cathode chambers wherein two valves are disposed along the conduits for the purposes of purging the anode and cathode chambers during an excess of pressure build-up. Herron fails to teach or suggest, however, valves that are able to control the flow of media from the anode chamber into the cathode chamber. US '681 to Horiguchi, who teaches a fuel cell system that has a plurality of fuel cells each having a cathode and an anode disposed on opposite sides of an electrolyte membrane wherein the fuel cell system is also equipped with water spray nozzles that spray liquid water directly onto the cathode. Horiguchi fails to teach or suggest, however, the disposition of the water spraying nozzles adjacent to the proton conducting membrane. US '805 to James et al., who teach a method of

Art Unit: 1746

operating a fuel cell wherein the excess hydrogen in an anode chamber is purged from the chamber and directed to a hydrogen storage unit. James et al. fail to teach or suggest, however, a conduit connecting the chambers wherein valves control the flow of media from the anode chamber into the cathode chamber. US '866 to Van Dine et al., who teach a direct methanol fuel cell system wherein the anode and cathode chambers are connected via conduits for sending and receiving electrical signals that dictate whether or not to deliver more fuel to the chambers. Van Dine et al. fail to teach or suggest, however, a conduit connecting the chambers wherein valves control the flow of media from the anode chamber into the cathode chamber. US '563 to Frank et al., who teach a fuel cell system comprising dryers connected to the stack for the removal and recovery of moisture from the anode chamber. Frank et al. fail to teach or suggest, however, a conduit connecting the anode and cathode chambers wherein valves control the flow of media from the anode chamber into the cathode chamber.
